DATE:

18th of December 2017

SUBJECT:

Launch of the online store for the US Professional Music & Audio industry.

There are more than 100 products for Acoustic Treatment, Insulation and decoration.

FOR IMMEDIATE RELEASE

AcousticShop.net – The NEW online store for all of US customers' acoustic needs.

Celebrating its 25th Anniversary, JOCAVI® Acoustic Panels presents its NEW online store for direct purchase from the US market. AcousticShop.net starts selling to US customers on January 10th 2018. In this store you can find more than 500 Acoustic Treatment and Acoustic Insulation products.

We cordially invite you to visit us at our booth at the Winter NAMM 2018 (booth #10321) to check out the JOCAVI® products NEW releases for 2018.

JOCAVI® is launching two NEW models of high-end diffusors and also four NEW high-end low frequency tuned absorbent panels.

JOCAVI®, Acoustic Panels, Lda.

Avenida Pedro Álvares Cabral - C. Empresarial Sintra Estoril - V Armazém B18 - 2710-297 Sintra - Portugal

More info is available on our website.

1. Meet the NEW JOCAVI® [NEO 3Q](#) and also the JOCAVI® [NEO 6Q](#):

From many years quadratic diffusers became a classic shape in architectural acoustics. JOCAVI® revisited and made a new design of the oldest ever project of acoustic diffuser modules. Starting from the same principle of calculations for quadratic diffusers, JOCAVI® reviewed it with a new approach and added a new energy flow calculation theory that added better predicates and advantages.

More info at: <http://www.JOCAVIacousticpanels.com/uk/products/dif.neo3q/index.htm>

More info at: <http://www.JOCAVIacousticpanels.com/uk/products/dif.neo6q/index.htm>

2. Check out the JOCAVI® LOWNOTE® presenting two NEW models of low frequency tuned absorbent high-end acoustic panels.

JOCAVI® LOWNOTE® is available for walls, ceilings and for corners. Both LOWNOTE® models are available in two different shapes named “Clover and Petal”.

The LOWNOTE W® acoustic panel is a broadband low-frequency sound absorber designed to balance the modal distribution on small rooms like studios, music listening rooms, and home-cinemas. The principle used to develop the LOWNOTE W® is the Helmholtz Resonator reasoning, through the combination of a coloured engineered wood fibre board box with an ABS velvet finishing front membrane which creates a tuned resonance chamber. The dampening chamber system combined with the front concave shaped ABS membrane offers a large range of bass control over several octaves, while not contributing to add mid/high frequency absorption. This model can be combined with LOWNOTE C® for corner applications to extend the absorption and to fine tune the low end of the sound spectrum. These combinations lengthen the lower frequencies absorption to a homogenous absorption range.

More at: <http://www.JOCAVIacousticpanels.com/uk/products/lf.Lownote/index.htm>

ATP® - Cost effective brand is launching a NEW absorbent panel model named ATP® Noven®

3. ATP® Noven:

Available in four different perforations with an amazing velvety finishing.

NOVEN® is a perforated flat shape acoustic panel. It is made of flexible open-cell acoustic foam with a rigid housing of perforated ABS, with coloured velvety finishing. This attractive product allows the combination of two colours; the colour of the housing and colour of the fabric colour, giving its appearance several appealing colour combinations. The inner absorbing core is made of open-cell acoustic foam composing the inner absorption core with fire-resistant fabric finishing.

AcousticShop.net is a JOCAVI® Acoustic Panels brand.

Company info:

JOCAVI® GROUP®

JOCAVI® has solutions for the most demanding ears, whether for auditoriums, concert halls, recording studios, video studios, radio stations, TV stations, cinemas, sports halls, trade shows, industrial pavilions, swimming pools, public spaces, commercial and retail spaces, offices or your own listening room at home. JOCAVI® presents acoustic treatment panels which blend well with any decor and are easily mounted on ceilings or walls.

JOCAVI® brand is renowned for the excellence and high performance of its products and has become the leading name in the development and production of high-end acoustic treatment panels for the professional audio industry. Unique diffusers made of rare raw materials and the very effective low-frequency absorbers are the best-selling and most outstanding representatives of the brand.

JOCAVI® sets the standard for the high acoustic performance of its products. It stands out for its experience coupled with a constant drive for innovation. Its different models, made from the most varied raw materials in several colours and finishes, are divided into three categories (diffusers, absorbers and low-frequency absorbers), providing JOCAVI® with the largest and most versatile range of acoustic panels on the market.
